***In psychology and the
cognitive sciences, perception
is the process of acquiring,
interpreting, selecting, and
organizing sensory
information. Methods of
studying perception range
from essentially biological or
physiological approaches,
through psychological
approaches to the often
abstract 'thought-
experiments' of mental
philosophy.***

What is the Cognitive Approach? (with pictures)
Psychologist Richard Gregory (1970) argued that perception is a constructive process which relies on top-down processing. Stimulus information from our environment is frequently ambiguous so to interpret it, we require higher cognitive information either from past experiences or stored knowledge in order to makes inferences about what we perceive.

The Importance of Visual Perception in Cognitive Processes ...
Much faulty communication can result from differences in

the perception of the same events and symbols. ... A sociological approach in functionalism is the consideration of the relationship between the functions of smaller parts and the functions of the whole. ... Cognitive Development: Age 7-11

**Social cognitive theory was
developed by Stanford
psychologist Albert Bandura.
The theory views people as
active agents who both
influence and are influenced
by their environment. A major
component of the theory is
observational learning: the
process of learning desirable
and undesirable behaviors by
observing others, then
reproducing learned
behaviors in order to
maximize rewards.**

Approaches of perception in cognitive psychology in ... This study uses a novel theoretical framework, cognitive sociology, to examine social aspects of human perception in relation to task-based information seeking behavior, which has been little understood theoretically and empirically in the field of information science.

Perception: A Cognitive Sociological Approach Asia ... The top-down is basically constructive approach. In constructive perception, the perceiver constructs a cognitive perception of a stimulus. According to

constructivists, for the period of perception we quickly form and test various hypotheses about percepts. The percepts are based on three things: • what we sense (the sensory data)

Three Major Perspectives in Sociology - CliffsNotes
Cognitive psychology is the scientific study of the mind as an information processor. Cognitive psychologists try to build up cognitive models of the information processing that goes on inside people's minds, including perception, attention, language, memory, thinking, and consciousness.
