Peugeot 406 hdi(90) running problems - RichardW Don't forget this is a modern common rail engine, where the injection is controlled by computer. It's not exactly unknown for the low pressure fuel pumps to go faulty on these engines - this could certainly give variable fuel pressures - although usually this results in a total no-start condition.

How to prevent common turbo failures with the Peugeot ...

Hi I have a 2001 HDi 110 Peugeot 406. Not had any problems at all in the past 6 months. Yesterday while working on another of my cars I left the radio on in my Peugeot which required me leaving the complete ignition on. A few hours later I went to start the car only for the battery to struggle to turn the engine over, my fault.

Having said that the Peugeot 406 2004 is made with an excellent level of build quality, problems with the four-cylinder petrol engines have been reported. Quite a lot of users have experienced engine stalling, especially with the 2.0-liter versions, so make a point of starting the engine from the cold when doing the test drive.

SOLVED: 1996 406 engine fuel problem - Fixya

The engine had a distinctive design; the gearbox and differential were located directly below the engine block. This design helped Peugeot produce its first front-wheel-drive car. The original XK had an 1,130 cc displacement; later the 1.3 liter XL engine appeared and then the 1.5 liter XR series which was developed specifically for the 305.

Peugeot 406 (2002 - 2004) - fuse box diagram - Auto Genius

My car is a T reg 406 HDi with 70K. I have an infrequent but dangerous problem. When acceleratating - but not severely - I get a slight judder from the engine like a slight misfire whereby the engine shuts down completely. Dashboard lights remain on. The car can be restarted but the engine is highly likely to shut down again. Anyone have similar problems and answers?
