Analysing noninferiority. The analysis of noninferiority depends on the noninferiority margin that is the largest clinically acceptable difference between the test drug and the active comparator 1, 2, 3, 6, 7. There are several applications of the margin in the analysis of noninferiority trials, but the recommended approach by regulators, such as the US Food and Drug Administration (FDA), is to ...

Defining the noninferiority margin and analysing ...

In pharmacology, partial agonists are drugs that bind to and activate a given receptor, but have only partial efficacy at the receptor relative to a full agonist. They may also be considered ligands which display both agonistic and antagonistic effects—when both a full agonist and partial agonist are present, the partial agonist actually acts as a competitive antagonist, competing with the ...
