Work is the product of force and displacement. In physics, a force is said to do work if, when acting, there is a movement of the point of application in the direction of the force.. For example, when a ball is held above the ground and then dropped, the work done on the ball as it falls is equal to the weight of the ball (a force) multiplied by the distance to the ground (a displacement).

Eletromagnetismo (AO 1945: electromagnetismo) é o ramo da física que estuda unificadamente os fenômenos da eletricidade e do magnetismo. [1] [2] [3] Esta teoria baseia-se no conceito de campo eletromagnético, a interação conjunta entre os campos elétrico e magnético.Tal interação é regida pelas quatro equações de Maxwell.. O campo magnético é resultado do movimento de cargas ...

Viene definito impulso la variazione della quantità di moto di un corpo che viene sottoposto ad un urto con un altro corpo. In altre parole è l'effettiva quantità di moto trasmessa al corpo urtato al momento dell'urto. Le quantità di moto iniziale e finale, utili per calcolare l'impulso, consistono nel prodotto della massa del corpo per la velocità finale e per la velocità iniziale.
