Plantation - Wikipedia

The typical plantation was a self-sustained community, an economic and political institution governed with a monopoly of authority by the planter. Plantation crops were determined by soil and climate, with tobacco, cotton, rice, indigo, and sugarcane, for example, each predominating in a certain zone of the southeastern colonies of North America.

Department of Agriculture - Main

(g) Plantation farming is not good for ecology. Over-exploitation and absence of crop-rotation depletes soil fertility and increases soil erosion. (h) As most of the owners of plantation estates reside outside the country—particularly at the initial stage of development—they have very little interest in the development of the region.
