Meeting industrial safety standards with pneumatics

What is a Sensing Edge? A Sensing Edge is a touch sensitive switch that sends a signal to start, stop or reverse a motor or even to ring a bell. Since they typically operate on 24 volts, the possibilities for applications are endless. Where can Sensing Edges be used? Anywhere that you want a simple touch to send a signal! Common applications ...

Safety Edge Kit, 20' | Action Industries

A pneumatic sensing edge is a pressurized air chamber (the gum hose) which fits inside the existing bottom seal of your door. When the pressurized chamber makes contact with an obstruction, the displaced air is sent to the air switch which is connected to the operator. The air switch then sends a signal through coil cord to the operator.

MillerEdge :: End Users :: Door Safety

important safety information. It is important to remember that a sensing edge provides a signal to an operator and does not itself control a door/grille/gate. PRINCIPLES NON-MONITORED EDGES Pneumatic Sensing Edge A pneumatic sensing edge is a flexible astragal or weather seal, with a rubber or plastic tube inside the full length of the astragal.
