Over-population is an example of the tragedy of the commons (ToC). Commons are un-owned or commonly-held "pool" resources that are "free," or not allocated by markets. Hardin's ToC model assumes that individuals are short-term, self-interested "rational" actors, seeking to maximize their own gains.

A General Note: The Continuous Growth/Decay Formula. For all real numbers t, and all positive numbers a and r, continuous growth or decay is represented by the formula $A\left(t\right)=a\left(e\right)^{rt}$ where. a is the initial value; r is the continuous growth rate per unit of time; t is the elapsed time; If r > 0, then the formula represents continuous growth.

The Sampling analysis tool creates a sample from a population by treating the input range as a population. When the population is too large to process or chart, you can use a representative sample. You can also create a sample that contains only the values from a particular part of a cycle if you believe that the input data is periodic.
