In answer to the first question: Later on, in the process of solving for  $\delta$ ,  $\delta$ , we will discover that  $\delta$  involves the quantity  $4 - \epsilon$ .  $4 - \epsilon$ . Consequently, we need  $\epsilon \leq 4$ .  $\epsilon \leq 4$ . In answer to the second question: If we can find  $\delta > 0$   $\delta > 0$  that “works” for  $\epsilon \leq 4$ ,  $\epsilon \leq 4$ , then it will “work” for any  $\epsilon > 4$   $\epsilon > 4$  as ...

Optimization is a big part of machine learning. Almost every machine learning algorithm has an optimization algorithm at its core. In this post you will discover a simple optimization algorithm that you can use with any machine learning algorithm. It is easy to understand and easy to implement. After reading this post you will know: What is gradient descent?

Quantifying Closeness.  
Before stating the formal definition of a limit, we must introduce a few preliminary ideas. Recall that the distance between two points and on a number line is given by  $|x - y|$ . The statement  $|x - y| < \epsilon$  may be interpreted as: The distance between  $x$  and  $y$  is less than  $\epsilon$ ; The statement  $|x - y| > \epsilon$  may be interpreted as:  $x$  and  $y$  are at least  $\epsilon$  apart; It is also important to look at the ...
