Prentice Hall History of Our World: Online Textbook Help ...

The equation " $\text{HA} \rightleftharpoons \text{H}^+ + \text{A}^-$ " is so much easier to write that chemists still use it to represent acid-base reactions in contexts in which the proton donor-acceptor mechanism does not need to be emphasized. Thus, it is permissible to talk about "hydrogen ions" and use the formula  $\text{H}^+$  in writing chemical equations as long as you remember that they are not to be taken literally in the ...

The Hydronium Ion - Chemistry LibreTexts

The rate at which work is done is referred to as power. A task done quite quickly is described as having a relatively large power. The same task that is done more slowly is described as being of less power. Both tasks require the same amount of work but they have a different power.

When you're performing pH calculations, always make sure your answers make sense. An acid should have a pH much less than seven (usually one to three) and a base should have a high pH value (usually around 11 to 13). While it's theoretically possible to calculate a negative pH, pH values should be between 0 and 14 in practice. This means that a ...

Here's How to Calculate pH Values - ThoughtCo  
Calculating the pH of a weak acid is a bit more complicated than determining the pH of a strong acid because weak acids don't completely dissociate in water. Fortunately, the formula for calculating pH is simple. Here's what you do.
