Chapter 16 - Primate Evolution Flashcards | Quizlet

70 Million Years of Primate Evolution Many people take an understandably human-centered view of primate evolution, focusing on the bipedal, large-brained hominids that populated the jungles of Africa a few million years ago.

Quiz: Human and Primate Evolution - The Biology Corner

Evolution of Primates. The first primate-like mammals are referred to as proto-primates. They were roughly similar to squirrels and tree shrews in size and appearance. The existing fossil evidence (mostly from North Africa) is very fragmented. These proto-primates remain largely mysterious creatures until more fossil evidence becomes available.

26.3 Primate Evolution

primates are related and how they evolved. Biologists classify primates into two major groups: prosimians and anthropoids, as shown in Figure 16.2. Prosimianlike primates evolved first Prosimians are small, present-day primates that include, among others, the lemurs, aye-ayes, and tarsiers. Most prosimians have large eyes and are nocturnal.

Chapter 16: Primate Evolution Vocabulary Flashcards | Quizlet
