Probability and Statistical Inference - Pearson

Statistical inference always involves an argument based on probability. In this court case, the prosecution used two different types of arguments to provide evidence of cheating. The first is an example of statistical inference because it is based on probability. We set up a simulation under an assumption that the prosecutor made.

Probability and Statistical Inference 9th edition ...

Statistical inference is the process of using data analysis to deduce properties of an underlying distribution of probability. Inferential statistical analysis infers properties of a population, for example, by testing hypotheses and deriving estimates. It is assumed that the observed data set is sampled from a larger population. Inferential statistics can be contrasted with descriptive statistics.
