Student Solutions Manual For Miller & Freund's Probability ...

The probability of each outcome is $\frac{1}{36}$ so the required probability is $15 \times \frac{1}{36} = \frac{5}{12}$. This probability is less than 0.5 because of the event that both scores are equal. The complement of this event is the event that the red die has a score less than or equal to the score on the blue die, which has a probability of $1 - \frac{5}{12} = \frac{7}{12}$.
