Solutions to Problems in Solid State Physics II Problem 2005-I \hbar is the maximum energy of band 1 (follows from the specification of the Fermi surface). The number of electronic states in one band, within the 1. Brillouinzone, is twice the number of k states, i.e. twice the number of unit cells in the system. If $\int_{\text{band 1}} c$ all states in band 1, and no states in band 2,

Solution: The co-ordination number of barium ions tells us that it is surrounded by eight fluoride ions (charge $8 \times (-1) = -8$). In order to balance out the eight negative charges, we need four barium ions (charge $4 \times (+2) = +8$). Hence, the co-ordination number of the fluoride ions must be 4. balance out to neutrality.
