# Access Free Python Owners Manual

The Python Protocol Buffers implementation is a little different from C++ and Java. In Python, the compiler only outputs code to build descriptors for the generated classes, and a Python metaclass does the real work. This document describes what you get after the metaclass has been applied. Compiler Invocation

The ball python (*Python regius*), also called the royal python, is a python species native to West and Central Africa, where it lives in grasslands, shrublands and open forests. This nonvenomous constrictor is the smallest of the African pythons, growing to a maximum length of 182 cm (72 in). The name "ball python" refers to its tendency to curl into a ball when stressed or frightened.
