On this page we talk about how external beam radiotherapy can be used to try to get rid of localised prostate cancer (cancer that hasn't spread outside the prostate) or locally advanced prostate cancer (cancer that has spread to the area just outside the prostate).. Radiotherapy can also be given to some men whose cancer has spread to other parts of the body (advanced prostate cancer).

External beam radiotherapy | Prostate Cancer UK

Intraoperative radiation therapy (IORT), is radiation therapy that is administered during surgery directly in the operating room (hence intraoperative).. Usually therapeutic levels of radiation are delivered to the tumor bed while the area is exposed during surgery. IORT is typically a component in the multidisciplinary treatment of locally advanced and recurrent cancer, in combination with ...

Intraoperative radiation therapy - Wikipedia

radiotherapy equipment in normal use ought to be able to pass. The most common form of criterion is a " suspension level " for a measurement of a performance or safety parameter. Failure to meet a suspension level will establish that the operation of the equipment involved is sufficiently poor to raise an alarm indicating action is required.

RADIATION PROTECTION N ° 162 - European Commission

In the field of medical treatment, proton therapy, or proton radiotherapy, is a type of particle therapy that uses a beam of protons to irradiate diseased tissue, most often to treat cancer. The chief advantage of proton therapy over other types of external beam radiotherapy (e.g., radiation therapy, or photon therapy) is that the dose of protons is deposited over a narrow range of depth, which ...

Proton therapy - Wikipedia

The term " clinical treatment planning " should not be confused with CPT codes that describe dosimetry isodose plans, which occur later in the process of care [e.g., teletherapy isodose plan (CPT codes 77306-77307), 3-D radiotherapy plan (77295), IMRT plan (77301) and brachytherapy isodose plan (77316-77318)].
