Setup the FDTD parameters. In FDTD there is a conflict between using a wide frequency band pulse and the cutoff frequency of the waveguide. In FDTD, we prefer to use a wide frequency band pulse to study a broad range of frequencies and to shorten the simulation time. Waveguide has a cutoff frequency below which the wave will not propagate.

waveguides, the dominant mode is designated TE_{1,0} for rectangular, and TM_{1,1} for circular, cross sectional geometry. In contrast to the two-conductor transmission lines where TEM propagation is dominant, inside a metallic (single-conductor) waveguide Maxwell's equations require both divergence and curl of the electric field to be zero, and thus
