## Refactoring Databases - Add Mirror Table

Evolutionary database design involves incremental improvements to the database schema so that it can be continuously updated with changes, reflecting the customer's requirements. People across the globe work on the same piece of software at the same time hence, there is a need for techniques that allow a smooth evolution of database as the design develops.

## Refactoring Databases - Martin Fowler

A database refactoring is a small change to your database schema (the table structures, data itself, stored procedures, and triggers) which improves its design without changing its semantics. Database refactoring is a technique which supports evolutionary development processes. Collaboration between the data team and developers
