In 1915, Einstein published his theory of general relativity to factor gravity into the relativistic view of the universe. The key concept to remember is the equivalence principle , which states that gravity pulling in one direction is equivalent to acceleration in another.

General relativity is a theory of gravitation developed by Einstein in the years 1907–1915. The development of general relativity began with the equivalence principle , under which the states of accelerated motion and being at rest in a gravitational field (for example, when standing on the surface of the Earth) are physically identical.
