 $\bigcup_{n=1}^{\infty} X_n$ yields a countable
dense subset. Therefore, X is sep-
arable (see pbm. #22) which
shows that it has a countable
base (see pbm #23). Gee, that
was fun. I see it takes a lot longer
to type these problems up in
LATEX rather than by hand, but I
think it'll be a useful tool for me
to learn anyway.

Solution. Assume the contrary, that there is a rational number p such that $p^2 = 12$. Then there are integers m and n with $p = \frac{m}{n}$ and for which 3 is not a common factor. By assumption, $m^2 = 12n^2$, so m^2 is divisible by 3, and therefore m is divisible by 3.

But then m^2 is divisible by 9. This means that $12n^2$ is divisible by 9, so $4n$ is divisible by 3.

had seemed of late rather cooler to Rudin. 'What is the secret of it?' he thought, with a sidelong look at her haughtily-lifted head. He had not long to wait for the solution of the enigma. As he was returning at twelve o'clock at night to his room, along a dark corridor, some one suddenly thrust a note into his hand. He looked
