allow to check SAP objects in a customer system, with the exception of code recently modified by an SAP note. Maybe you could use the object collector "Called/Calling Procedures" which should be able to find called programs and build an objectset based on the static call stack.

How to run SAP code inspector to do static ABAP ...

The code inspector tests single objects or object sets(Programs, function groups, dictionary objects, classes and others) for performance, security, serviceability, error

proneness and statistical information.

Insights of code inspector - SAPTechnical.com

If we are looking to review development from a quality or standards point of view, either our own code or a peer review, SAP provides the Code Inspector tool. The Code Inspector is a configurable tool that can be used to check the quality and consistency of development from a single program up to an entire Package. There are two main transactions used to access the Code Inspector, SCI and SCII. Transaction SCI can be used to configure the Code Inspector and perform inspections.
