To carry out a deletion of all replicated data, include the tables COBK and AUFK. Stop Load/Replication stops any current initial load or replication process. Note that stopping the load or replication process for a table will delete any triggers for that table in the source system (and the corresponding logging table).

FI-FM is the obsolete name for Funds Management (for old releases such as 30F, 40B, 46C). Now it is called PSM-FM and has the same meaning. Activation of public sector business function means that you want to use funds management functionality (PSM-FM). Since release 4.7 it became an add-on and not part of SAP-APPL package anymore.

SAP Funds Management Configuration - YouTube
Configuring SAP Inbound Processing. SAP inbound processing requires the upstream system to transfer an IDoc to the IDoc interface through the R/3 System port. For this reason, you do not have to specify a port in the inbound partner profiles; the IDoc interface only must recognize the upstream system as a port.

Configuring SAP for Inbound and Outbound Processing
Latest versions of the available SAP operators can be leveraged by using the SAP ABAP operator. In the configurations for the operator choose your ABAP connection and F4 on the ABAP Operators which will give you a list of all the available SAP ABAP operators : From here select the SLT Connector V1.
