Dots per inch (DPI, or dpi) is a measure of spatial printing, video or image scanner dot density, in particular the number of individual dots that can be placed in a line within the span of 1 inch (2.54 cm). Similarly, dots per centimetre (d/cm or dpcm) refers to the number of individual dots that can be placed within a line of 1 centimetre (0.394 in).

How to Choose the Resolution Of Your 2D assets - Unity Blog
In a digital image, the number of pixels are represented by the DPI (or PPI) and the width x height dimensions. For instance, a 2000 x 2000 pixels image at 72 DPI has 4,000,000 total pixels. To make the image smaller, say 1000 x 1000 pixels, I can simply reduce it in size and it'll retain the same level of detail, just in a smaller image.

DPI vs PPI: What's the Difference? (Printing & Scanning In 2022)
DPI specifically refers to the measurement of the speed at which a mouse cursor moves on-screen, in relation to the distance a user is moving the mouse. For example, if you were to move your mouse an inch to the right with a low DPI, and then move your mouse an inch to the right with a higher DPI, the cursor on-screen would move further in the ...

PPI vs. DPI: what's the difference? - 99designs
What should DPI (or PPI) be for printing high-quality artwork? In many cases, the best resolution for printing is 300 PPI. At 300 pixels per inch (which roughly translates to 300 DPI, or dots per inch, on a printing press), an image will appear sharp and crisp. These are considered to be high resolution, or high-res, images.

Unravelling PowerPoint picture size and resolution | BrightCarbon
Low-resolution images get increasingly blurry the more you increase their size. For example, if you scan something that is 5.5 x 8.5 inches but want a print size of 11 x 8 inches, you will need to double the scale for your final print. If this image is scanned at 72 DPI, it will be blurry, even if it was clear when you first scanned it.

Dots per inch - Wikipedia
Screen Resolution. Screen resolution is measured in pixels per inch (PPI). A pixel is a tiny square of color. A monitor uses tiny pixels to assemble text and images on screen. The optimal resolution for images on screen is 72 DPI. Increasing the DPI won't make the image look any better, it'll just make the file larger, which will probably ...
