...

In an in-line engine with a single exhaust elbow, this complete blockage will automatically cause engine overheating before the exhaust overheats. This will signal a problem before a fire hazard develops.

In a V-type engine however, the situation is more dangerous since one elbow could become

overheating I would suggest you invest in a flushing attachment before you buy anything. It attaches to the water intake at the bottom of your stern drive, you hook a garden hose and run the water before you start the engine. It's not a good idea to NOT rev engine to high when you do this. sounds like your
