De?nition 1.1 A random variable is a map $X : \Omega \rightarrow \mathbb{R}$ such that $\{X \leq x\} = \{\omega : X(\omega) \leq x\} \in \mathcal{F}$ for all $x \in \mathbb{R}$. Notice that $\{X \leq x\}$ is more often the notation of an event than the notation for the outcome of an experiment. The cumulative distribution function (c.d.f.) of a random variable X is F . $X(t) = P(X \leq t)$.

Sheldon M Ross Stochastic Process 2nd Edition Solution Manual

That is in part a function of my background -- I did a physics undergrad with a math minor, and this book is written like a cross between a physics and a math book. Stochastic processes are used in more and more areas, and perhaps if you come from a different background there's a better book for you.

Stochastic processes are used in more and more areas, and perhaps if you come from a different background there's a better book for you. Ross doesn't hit some topics which would be useful to people in finance or economics, for example, like stochastic calculus, and his emphasis on aspects of queueing theory would probably be downplayed in a ...

In Example (5), if $E = (2,6)$, then E is the event that the car lasts between two and six years. For any two events E and F of a sample space S we de?ne the new event $E \cup F$. to consist of all outcomes that are either in E or in F or in both E and F . That is, the event $E \cup F$ will occur if either E or F occurs.
