A computer is a machine that can be programmed to carry out sequences of arithmetic or logical operations automatically. Modern computers can perform generic sets of operations known as programs. These programs enable computers to perform a wide range of tasks. A computer system is a "complete" computer that includes the hardware, operating system (main software), and peripheral equipment ...

Page 52. and James Reason, among others. Charles Perrow's analysis of the accident at Three Mile Island identified how systems can cause or prevent accidents. 4 James Reason extended the thinking by analyzing multiple accidents to examine the role of systems and the human contribution to accidents. 5 "A system is a set of interdependent elements interacting to achieve a common aim.

Human IL-6 DuoSet ELISA DY206-05: R&D Systems
Based on my limited understanding, the BMS monitors the temperature, current and voltage signals and raises flags when any of these measurements or a combination of it goes out of the safety ranges. So I am curious to know whether there is still a need to predict the failures when the BMS is kind of already doing its job to protect the battery ...
