THE LAB ACTIVITY. Purpose – The purpose of the energy skate park simulation is to see how energy gets transferred in a real world application. In this simulation you will manipulate the skater and track to determine how it affects the energy of the system. In our skate park, there is no friction until part C, so you will not be dealing with that factor.

This is the original Java version of the PhET Energy Skate Park simulation, in which students explore conservation of energy by building ramps, jumps, and tracks for a skateboarder. For the beginning learner, the relationship of kinetic and...

Energy Skate Park Lab - PhET Contribution

Students may understand that potential and kinetic energy are traded off on a roller coaster or such thing, but sometimes they can't translate that into a graph. This assignment makes use of predictions of graphs, then the skate park simulation to check understanding of how energy is traded from potential to

kinetic, and then to heat.

Energy Skate Park: Basics - PhET

This interactive simulation allows students to explore energy concepts by studying the motion of a skateboarder. The user can design ramps, jumps, and arbitrarily shaped tracks and observe the subsequent motion. The mass of the skateboarder,...
