This happens because gas doesn't have the same lubricity characteristics as oil. When mixed with oil, the combo of gas and oil will ruin the lubricity characteristics of the oil and possibly ruin your engine. If your engine seizes, it means that the repairs will be very costly. By costly I mean thousands of dollars if you want to replace the engine.

### Small Gas Engine Repair Paul

In an ideal gas turbine, gases undergo four thermodynamic processes: an isentropic compression, an isobaric (constant pressure) combustion, an isentropic expansion and heat rejection. Together, these make up the Brayton cycle. In a real gas turbine, mechanical energy is changed to heat energy (due to internal friction and turbulence) into pressure and thermal energy when the gas is compressed ...
