Software Engineering Hans Van Vliet - hokage.iida.ac.id

The Bellman-Ford algorithm solves the single-source shortest-paths problem in the general case in which edge weights may be negative. Given a weighted, directed graph  $G = (V, E)$  with source  $s$   
?  $R$ , the Bellman-Ford algorithm returns a boolean value indicating whether or not there is a negative-weight cycle that is reachable from the source.
