A – Kaplan blades have square tips that run just inside the inner surface of a nozzle, thus reducing tip losses (as in bow thruster blades). B-series blades have the normal rounded tips of propellers in open flow, but can be run inside a nozzle, this is usually a retrofit as they don't get the advantage of reduced tip loss.

The use of these blades in conjunction with a variable-blade Kaplan turbine provides a considerable measure of control over the runner speed. In small applications where such tight speed control may not be essential and where costs are critical it may be possible to use one method of control—either a variable-blade turbine or a regulator—rather than both.
