Introduction to Topology (Exercises and Solutions) A topology is a non-empty set X , and a collection of subsets of X satisfying the following three axioms: (i) X and the empty set \emptyset , belong to \mathcal{T} . (ii) Any (finite or infinite) number of sets in \mathcal{T} belongs to \mathcal{T} . (iii) The intersection of any two sets in \mathcal{T} belongs to \mathcal{T} .

Topology - Wikipedia

This text has a thorough introduction to topology, especially as it is related to analysis. With several exercises (complete with solutions for the Dover edition), this text provides good practice and a reader to work out some of the main ideas. However, as stated in the book's preface it is lacking in examples.

Principles of Topology. The topological discussions include open and closed sets, limit points, and so on. The Heine-Borel theorem for closed and bounded intervals, for example, is proved, but with the word "compact": the statement in this chapter is that any open cover of a closed and bounded interval contains a finite subcover.
