Spatial Database - A Tour CH1 & CH2

Abstract: We propose a definition of a spatial database system as a database system that offers spatial data types in its data model and query language and supports spatial data types in its implemen-tation, providing at least spatial indexing and spatial join methods. Spatial database systems offer the underlying database technology for geographic information systems and other applications. We

Spatial Databases: A Tour - Shashi Shekhar, Sanjay Chawla ...

A spatial database is a database that is enhanced to store and access spatial data or data that defines a geometric space. These data are often associated with geographic locations and features, or constructed features like cities. Data on spatial databases are stored as coordinates, points, lines, polygons and topology.

Fajin was made famous by The Magus of Java John Chang who could release Qi in the form of electricity powerful enough to start fires. John Chang, the Indonesian Chinese from Indonesia first began to use Fajin in his early years as a form of self-defense. Later he used Fajin to heal people in his healing practices.

Spatial Databases and Geographic Information Systems

A spatial database is a database that is optimized to store and query data related to objects in space, including points, lines and polygons. While typical databases can understand various numeric and character types of data, additional functionality needs to be added for databases to process spatial data types.
