What Causes a Diesel Engine to Stop Running? - CAR FROM JAPAN
As fuel is consumed by the engine, the level in the fuel tank lowers. To make up for this, the fuel cap uses a small vent to allow air to enter the tank. If the fuel cap vent is clogged, air won't be able to enter the tank and a vacuum or "vapor lock" will occur. This stops the flow of fuel to the carburetor causing the engine to stall.

Dictation, Transcription Equipment | Speech Recognition Software ...
I read somewhere that while a 'normal' car's engine would start up about 50,000 times during the car's life, on a stop-start car, that figure would be around 500,000. To make all those starts seamless, the stop-start won't kick in if it detects the battery is dying and it's going to struggle to restart the car.

Myth-busting: Does stop-start damage your engine?

Lexus Won't Start But Has Power: How To Diagnose Starter Problems
A strong healthy battery is critical to starting any electric key start lawnmower. A typical mower engine will only create enough energy for the spark plug to fire if the engine cranks over fast enough, around 350rpm min. If your engine sounds like it isn't cranking over at the usual speed, try jump-starting. This will rule out a weak battery.
