Introduction to geological data analysis | Open Library

Course Objective. Geoscientists find resources by assessing the characteristics and constraints of the earth subsurface. The subsurface has been formed over millions of years, and by the interaction of a host of sedimentary processes and time-varying boundary conditions like climate, sea level and tectonics.

From A. R. H. Swan & M. Sandilands, Introduction to ...

Unlike most other sciences, geology does not have a strong tradition of numerical analysis. It is, however, increasingly common for primary geological information to be quantitative rather than descriptive, and analysis of numerical data is now a skill of immense value to any earth scientist.
