In the pharmaceutical industry, drug dissolution testing is routinely used to provide critical in vitro drug release information for both quality control purposes, i.e., to assess batch-to-batch consistency of solid oral dosage forms such as tablets, and drug development, i.e., to predict in vivo drug release profiles. There are three typical situations where dissolution testing plays a vital ...

## Dissolution Technologies

Dissolution is an important step during preformulation studies because the rate of drug dissolution of a drug will exert a direct impact on bioavailability and drug delivery aspects (Bergstrom et al., 2014). Dissolution can be defined as the process through which drug particles tend to dissolve in the body fluids. Any change in drug dissolution will significantly affect the bioavailability.
