“TCP/IP” is the acronym that is commonly
used for the set of network protocols that
compose the Internet Protocol suite. Many
texts use the term “Internet” to describe
both the protocol suite and the global wide
area network. In this book, “TCP/IP” refers
specifically to the Internet protocol suite.

Suite 4th Edition ...

Protocols are sets of rules for message formats and procedures that allow machines and application programs to exchange information. These rules must be followed by each machine involved in the communication in order for the receiving host to be able to understand the message. The TCP/IP suite of protocols can be understood in terms of layers (or levels).

The TCP/IP Protocol Suite. The TCP/IP protocol suite consists of many protocols that operate at one of 4 layers. The protocol suite is named after two of the most common protocols □ TCP (transmission Control Protocol) and IP (internet Protocol). TCP/IP was designed to be independent of networking Hardware and should run across any connection media.

TCP/IP protocols - IBM

TCP/IP (Transmission Control Protocol/Internet Protocol): TCP /IP, or the Transmission Control Protocol/Internet Protocol, is a suite of communication protocols used to interconnect network devices on the internet. TCP/IP can also be used as a communications protocol in a private network (an intranet or an extranet).
