AC test is a method of testing whether a quadratic trinomial is factorable or not. It is also a method of identifying the factors of a general quadratic trinomial $Ax^2 + B(x) + C$. A quadratic trinomial is factorable if the product of A and C have M and N as two factors such that when added would result to B.

A trinomial in the form $x^2 + ax + b$ can be factored to equal $(x + m)(x + n)$ when the product of m and n equals b and the sum of $m + n$ equals a .
1: Common factor if you can.
2: Find two integers m and n , that their product is equal to b and their sum is equal to a .
Step 3: Substitute the numbers m and n directly into the expression $(x + m)(x + n)$.
