Introduction to Hypothesis Testing I. Terms, Concepts. A. In general, we do not know the true value of population parameters - they must be estimated. However, we do have hypotheses about what the true values are. B. The major purpose of hypothesis testing is to choose between two competing hypotheses about the value of a population parameter.

Hypothesis testing is a decision-making process for evaluating claims about a population. We must define the population under study, state the particular hypotheses that will be investigated, give the significance level, select a sample from the population, collect the data, perform the calculations required for the statistical test,
