History of technology - The Industrial Revolution (1750 ...

Iron making. The Industrial Revolution could not have developed without coal and iron.Coal was needed to make steam engines run and to produce iron.At the beginning of the 18 th century iron makers found a way to extract pure iron out of iron ore.They used coke, which was purer than coal and burned hotter, to melt the ore.. As a result, the iron production increased and by the early 1800s ...

INDUSTRIAL REVOLUTION | Educational Video for Kids. - YouTube

The Industrial Revolution (1750-1900). The term Industrial Revolution, like similar historical concepts, is more convenient than precise. It is convenient because history requires division into periods for purposes of understanding and instruction and because there were sufficient innovations at the turn of the 18th and 19th centuries to justify the choice of this as one of the periods.

The Industrial Revolution Explained Steam

The steam engine, either used on its own or as part of a train, is the iconic invention of the industrial revolution. Experiments in the seventeenth century turned, by the middle of the nineteenth, into a technology which powered huge factories, allowed deeper mines and moved a transport network.
