The Paleocene–Eocene Thermal Maximum (PETM), alternatively "Eocene thermal maximum 1" (ETM1), and formerly known as the "Initial Eocene" or "Late Paleocene Thermal Maximum", was a time period with a more than 5–8 °C global average temperature rise across the event. This climate event occurred at the time boundary of the Paleocene and Eocene geological epochs.

Thermal Conductivity Coefficient - an overview ...

Thermal resistance is a heat property and a measurement of a temperature difference by which an object or material resists a heat flow. Thermal resistance is the reciprocal of thermal conductance. (Absolute) thermal resistance  $R$  in kelvins per watt (K/W) is a property of a particular component. For example, a characteristic of a heat sink.; Specific thermal resistance or thermal resistivity  $R$  ...

Zong-Xian Zhang, in *Rock Fracture and Blasting*, 2016. 5.1.1.3 Thermal Conductivity. The thermal conductivity coefficient  $k$  is a material parameter depending on temperature, physical properties of the material, water content, and the pressure on the material [3]. The coefficient  $k$  is measured in watts per meter Kelvin (or degree) (W/mK). In general, a material with a large  $k$  is a good heat ...
