I am simulatng variable frequency transformer for power transfer in between two asynchronous networks. But the data(s), particularly moment of inertia is not known. Where can I obtain the data(s)

Variable Frequency Drives Troubleshooting  
For example, the small Powerstat shown in the photo (Figure 3) is rated at 120V and 2.25 Amps - 270VA. A traditional 270VA transformer with a 60V output would be able to supply 4.5A, but that does not apply to variable transformers. The single winding is the same diameter wire from end to end, so the maximum current at any voltage is 2.25A.
