The pudendal nerve provides the majority sensations and functions of the external genitals, the urethra, the anus, and perineum. It also controls the external anal sphincter and the sphincter muscles of the bladder. Image-guided pudendal nerve block is the most important diagnostic test following history and physical examination for patients with suspected pudendal neuralgia.

Pudendal nerve block (PNB) is performed for differential diagnosis and treatment of chronic pelvic and perineal pain. Several block methods, such as transvaginal, transperineal, computerized tomography-, ultrasound- and fluoroscopy-guided approach are currently under practice. Compared to others, a fluoroscopy-guided approach has several advantages, such as its relatively low cost, facility ...

Background and Objectives
Ultrasound-guided techniques for pudendal nerve block have been described at the level of the ischial spine and transperineally. Theoretically, however, blockade of the pudendal nerve inside Alcock canal with a small local anesthetic volume would minimize the risk of sacral plexus blockade and would anesthetize all 3 branches of the pudendal nerve before they ramify ...*
