Using Ultrasound in Anesthesiology | SonoSite

For all peripheral nerve
blocks, a high frequency
linear array ultrasound
(9-18 MHz) is used.

Peripheral nerves have a
variable sonographic
echotexture that is
affected by the

surrounding tissue.

Classically, nerve fascicles itself appear hypoechoic embedded within a more hyperechoic and homogenous perineurium and endoneurium.

techniques. 2 The
procedure 2.1

Indications and current
treatments 2.1.1

Regional nerve block is
used for anaesthesia
and/or analgesia during
or after surgery, and
also in the management
of chronic pain. It may
be used as an adjunct to
general anaesthesia.
