Apache Subversion – Wikipedia

This is what Version Control systems like Subversion do. In addition to keeping track of the source code change history it is often critical to relate the changes to the artifact (a task, a defect or a support request) that led the developers to make a change in the code.

Version Control with Git and SVN – RStudio Support

History. CollabNet founded the Subversion project in 2000 as an effort to write an open-source version-control system which operated much like CVS but which fixed the bugs and supplied some features missing in CVS. By 2001, Subversion had advanced sufficiently to host its own source code, and in February 2004, version 1.0 was released. In November 2009, Subversion was accepted into Apache ...

Version Control With Subversion download | SourceForge.net

SVN is a centralized version control system. It's different from distributed systems, like Git. Centralized version control means that the version history is stored in a central server. When a developer wants to make changes to certain files, they pull files from that central server to their own computer.

Version Control with Subversion – Tuleap latest version ...

Subversion is a centralized version control system: all team members work towards a single central repository, placed on a remote server. A "checkout" from this central repository will place a "working copy" on the user's machine. This is a snapshot from a certain version of the project on his disk.
