Physics Tutorial: Charging by Conduction - Physics Classroom

A normal (dip-slip) fault is an inclined fracture where the rock mass above an inclined fault moves down (Public domain.) An earthquake is what happens when two blocks of the earth suddenly slip past one another. The surface where they slip is called the fault or fault plane. The location below the earth's surface where the earthquake starts is called the hypocenter, and the location directly ...

Calculus I - Continuity (Practice Problems) - Lamar University

There is a relationship between work and mechanical energy change. Whenever work is done upon an object by an external or nonconservative force, there will be a change in the total mechanical energy of the object. If only internal forces are doing work (no work done by external forces), there is no change in total mechanical energy; the total mechanical energy is said to be "conserved."
