What is Engine? What are Main Types of Engine? - mech4study

Engine definition, a machine for converting thermal energy into mechanical energy or power to produce force and motion. See more. Engine | Definition of Engine at Dictionary.com

What Engine Is In A

An engine or motor is a machine designed to convert one form of energy into mechanical energy. Heat engines, like the internal combustion engine, burn a fuel to create heat which is then used to do work. Electric motors convert electrical energy into mechanical motion, pneumatic motors use compressed air, and clockwork motors in wind-up toys use elastic energy. In biological systems, molecular motors, like myosins in muscles, use chemical energy to create forces and ultimately motion.
