What Your Stool Is Telling You | The Dr. Oz Show

If your poop is otherwise normal but seems to be covered in some sort of whitish mucus, that might be a sign you have Crohn's disease. This condition leads to the formation of ulcers in the intestines that often produce mucus. If your poop is white and you're experiencing fever, vomiting, or pain - get to a doctor immediately.

7 Things Your Poop Says About You - Prevention

The color of your stool depends on a couple of things: your diet and how much bile is in it. Bile is a yellow-green fluid that helps digest fats. A healthy stool, then, should reflect a mixture of all the colors of the food you eat and that bile. Almost any shade of brown, or even green, is considered OK.

What your poop shape, size, and colour says about your health

Your poop is about 75 percent water. The rest is a combination of fiber, bacteria, and miscellaneous cells and mucus. The characteristics of your poop will tell you a great deal about how healthy your digestive tract is, everything from the color, odor, shape, size, and even the sound it makes when it hits the water and whether it's a "sinker" or a "floater" is all relevant information.
