usually considered "homogeneous" in wood mechanics. Many of the mechanical properties of wood tabulated in this chapter were derived from extensive sampling and analysis procedures. These properties are represented as the average mechanical properties of the species. Some properties, such as tension parallel to the grain, and all properties for some

PROPERTIES OF WOOD AND STRUCTURAL WOOD PRODUCTS
Wood has natural thermal properties, which greatly reduce heat transfer. While many materials transmit heat easily, wood does not due to its structure. Imagine looking at a box of straws from the end — that is what wood looks like when magnified about 200 times
