STUDENT SOLUTIONS MANUAL

iii) The intercept implies that, even if $mrate = 0$, the predicted participation rate is 83.05%. The coefficient on $mrate$ implies that a one-dollar increase in the match rate - a fairly large increase - is estimated to increase $prate$ by 5.86 percentage points. This assumes, of course, that this change $prate$ is possible (if, say, $prate$ is already at 98, this interpretation makes no sense).
