XML-RCP - To use these kinds of APIs, you call it using XML and it returns XML. This standard was further developed and became SOAP. In RESTful APIs, communication between applications is done using the underlying HTTP protocol (HyperText Transfer Protocol). HTTP is widely used on the internet, and many developers are already familiar with it.

This example also assumes that you have a file called "Data.xml" in the output directory of your project. The easiest way to do this is to add a new XML file into your project, insert the above XML data into the file, and name the file Data.xml. Finally, you should set the "Copy To Output Directory" property of the XML file to "Copy Always".
