Digital baseband transmission Passband transmission makes communication possible over a bandpass filtered channel, such as the telephone network local-loop or a band-limited wireless channel. An unfiltered wire is intrinsically a low-pass transmission channel, while a line code is intrinsically a pulse wave signal that occupies a frequency spectrum of infinite bandwidth.

It is based on full integration of ABB's Relion protection and control relays, Remote I/O unit RIO600 and Human Machine Interface (HMI)-based on COM600. The fast IEC 61850 GOOSE communication between the ABB devices ensures that the load-shedding signals are exchanged and distributed within milliseconds to avoid unnecessary loss-of-time in important processes.
